Date	26 october 2022
Team ID Project Name	PNT2022TMID0355 VirtualEye - Life Guard for Swimming Pools to Detect Active Drowning
Maximum Marks	2 marks

VIRTUAL EYE

Brainstorm & idea prioritization

In this session we aim to achieve a good base for beginning our project. With clear understanding of the task in hand, the next step would be to collectively put in our thoughts/ imagination and end with a proper feasibility study.

Ground Rules

Team

AiavKarthick

- Be Creative
- Rule out every possible ideas and improvements Make your points clear and purposeful
- . Don't hesitate. (Every point is noteworthy)
- . Arguments are good ALA it lands beneficial
- . Have various perspectives towards the problem

Choose your best "How Might We" Questions

Share the top 5 brainstorm questions that you created and let the group determine where to begin by selecting one question to move forward with based on what seems to be the most promising for idea generation in the areas you are trying to impact.

(†) 10 minutes

How might we detect and differentiate active drowning with the least possible error rate?

OUESTION 2 How might we automate the alert systems so as to provide crutial stats and info to the rescue team ?

How might we optimize the detection algorithm to yield results in the least time?

> How might we bring more privacy, yet use camera for detection?

|

QUESTION 5 How might we optimally use minimal hardware to get the most accurate information in a around the environment?

Have each participant begin in the "solo brainstorm space" by silently brainstorming ideas and placing them into the template. This "silent-storming"

avoids group-think and creates an inclusive environment for introverts and extroverts alike. Set a time limit. Encourage people to go for quantity.

Brainstorm as a group

Have everyone move their ideas into the "group sharing space" within the template and have the team silently read through them. As a team, sort and group them by thematic topics or similarities. Discuss and answer any questions that arise. Encourage "Yes, and..." and build on the ideas of other people along

15 minutes

Privacy feed is not being recorded or saved instead being used companies to get vital stats of a swimmer to

cameras

should be

maintained

properly for good results

Cameras & Hardwares

Cameras should be

oards for detecting drowning effectively especially on large

swimming pools.

System should

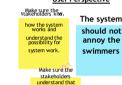

detect multiple

drowning and should report

the same

only for detection video stream

x y

hyperparameters must be found for

Al and ML

and also alrerting

Feasibility

Regardless of their importance, which tasks are more feasible than others? (Cost, time, effort, complexity, etc.)

You can use the Voting

on the strongest ideas.

drowning incident

When more people are drowning there will be a problem to detect all so multiple cameras are needed to eliminate such

The network

connectivity should be good

for faster alert

trasmission.

Will the system detect

properly if the pool is clumsy?

Network and Connectivity

transfer to achieve

live realay will les BW to get the

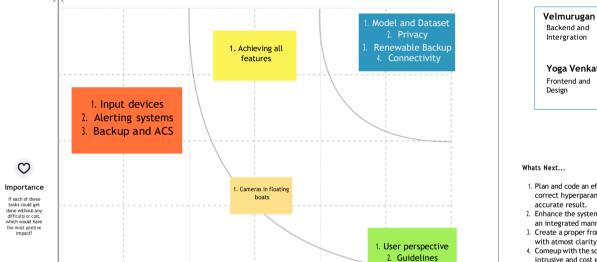

lassifiable video of

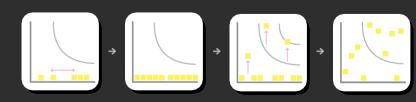

inderwater footage

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and

(1) 20 minutes

Decide your focus

Give each person two icons to vote which idea should your team focus on & assign the duties & responsibilities

Frontend and

- 1. Plan and code an effecient model and train it with the correct hyperparameters to produce a probable and accurate result.
- 2. Enhance the system to work in a proper environment in an integrated manner to yield a cohesive solution.
- 3. Create a proper frontend dash to give critial information
- with atmost clarity and least delay.
- 4. Comeup with the solution that is minimal, portable less intrusive and cost effective.
